FIBERGLASS LAMINATES FOR COLD ROOMS AND CLEANROOMS

COLD ROOMS

To ensure optimal storage of products such as food and pharmaceuticals, cold rooms **must maintain a consistent temperature and provide a thermally insulated, hygienic environment.**

Brianza Plastica's GRP laminates are EC-certified in accordance with Regulation (EC No. 1935/2004, making them suitable for direct contact with food.

CLEANROOMS

Maximum cleanliness and hygiene are essential in cleanrooms for the **pharmaceutical, medical and food & beverage industries.** This requires the use of advanced materials that minimise the presence of bacteria on surfaces.

Elycold and Elyplan flat laminates by Brianza Plastica are the ideal solution for cladding walls and ceilings or adding an extra layer of protection. They are easy to clean, highly durable and resistant to corrosive agents.

This resistance also makes them an excellent choice for constructing structures in marine environments, where **protection against salt-induced corrosion is critical.**

Brianza Plastica's laminates are an ideal solution for cladding cold rooms and cleanrooms, thanks to their characteristics of:

RESISTANCE AND DURABILITY

Elycold and Elyplan laminates offer **excellent resistance to corrosive agents**, are **completely waterproof**, have **low thermal expansion** and ensure **long-lasting performance**.

HYGIENIC SURFACES

Easy to clean and certified for food contact, Elycold and Elyplan do not release substances harmful to food products.

EASY TO REPAIR

HIGH IMPACT RESISTANCE

SUITABLE FOR CLADDING SURFACES TO BE RENOVATED AND FOR BONDING TO EXPANDED POLYSTYRENE, EXTRUDED POLYSTYRENE AND POLYURETHANE SUBSTRATES.

NO BAC CONTINUOUS ANTI-BACTERIAL PROTECTION

The **NO BAC laminate** developed by Brianza Plastica is specifically designed for environments requiring a high level of hygiene. It reduces the presence of bacteria on the surface, preventing subsequent colonisation and thus **ensuring a high level of added protection in any environment**.

The silver-based **NO BAC technology** is permanently integrated into the laminate's surface during the production process. Evenly distributed across the entire surface, it provides **antibacterial protection throughout the product's life cycle**.
